

## High Powered Wireline Magnet

The SS Series High Powered High Temperature Wireline Magnet is an extremely high strength magnet. The magnet will maintain the same high holding force at elevated temperatures experienced down hole. The magnetic field is concentrated mainly on the bottom of the magnet. This magnet has very low side magnetism so there is very little attraction to the wall of the tubing or casing. This makes the tool easier to convey into the well bore and virtually eliminating previously seen wear problems and damages to the tool from simple wellbore abrasion.
